

What number is shown by the models?

You can write the number in different ways.

One way to show the number is by using the **expanded form**:

$$300 + 20 + 8$$

Another way is the **standard form**:

328

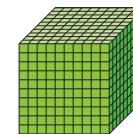

A third way is the **number word** form:

three hundred twenty-eight

All three ways show the same number.

The number word for 1,000 is one thousand.

- What place value models are shown?
- How many hundreds flats are there?
- How many tens rods?
- How many unit cubes?

- In expanded form, what does the first number tell you?
- What does the second number tell you?
- What does the third number tell you?

- You can also use words to name a number.

- How can you show 1,000 using hundreds flats?
